

4. When you click on the 'Install' button you should see a message 'Module installed successfully' and you should be able to configure the module by pressing the link 'Configure'.

5. As a beginning, after you have installed the module, you must set a few values – the mode of the system (it's strongly recommended to use the test mode first), your merchant id (a 5 digit number beginning with 9 for the test system and 7 for the live system) and your SOAP password (provided from mPAY24). In case your server is behind a proxy you must set these settings too. Save your settings!

6. With the 'Save' button will be create a connection with mPAY24, so in case all the settings are right you should see a list of the payment systems that are active for your merchant id by mPAY24. You can activate or deactivate some of the payment systems, set whether the end customer should be able to type the billing address on the pay page from mPAY24 or not (this feature is working only after accord with mPAY24). You are also able to set a lot of design settings for the mPAY24 pay page. After you are done with the settings click the button 'Save settings'.

## mPAY24

### mPAY24 Settings

Use the test mode to test the module. Later use the live mode if there were no problems during test mode. Remember to change your merchant ID and soap password according to the mode (test or live).

Mode Merchant ID SOAP Password 

In case your server is behind a proxy you should give the proxy host and port.

Proxy host Proxy port 

### Activate/deactivate mPAY24 payment systems
